a
Kepler anomaly solve field
near-parabolic hard corner
$|\partial E/\partial M| \gg 1$
eccentricity ↑
nonlinear shift grows
phase advance
$M\uparrow \Rightarrow E\uparrow$
well-conditioned bulk
72 × 180 = 12,960 roots
eccentric anomaly E [rad]
eccentricity e
mean anomaly M [rad]
b
matched solution cuts
solved E [rad]
S1: e=0.6
S2: e=0.9
S3: e=0.99
mean anomaly M [rad]
